

Instructions for moving CTF to the C:\CTF folder

The new CTF installation was changed to install CTF into the C:\CTF folder instead of the C:\Program Files\CTF folder as in the old installation. The following instructions will move all subfolders and files from the old installation directory (C:\Program Files\CTF) to the new installation directory (C:\CTF).

1. Download the CTF_Move.bat file, which will unzip into the main C:\ drive directory
2. Now, Click on START, then RUN
3. Type in the following Open command: C:\CTF_Move.bat and Click on OK
4. This will perform a copy of all files and subfolders to the new C:\CTF directory and rename the old C:\Program Files\CTF directory to C:\Program Files\CTF_old. This keeps you old installation intact in case you need to go back to running CTF in the old location
5. At this point, you should have a C:\CTF directory with all of your current files and subfolders.
6. Now, you need to change your desktop icons to point to C:\CTF
 - a. Right click on the Desktop Icon and click on Properties
 - b. Set the Target to C:\CTF\CTF.exe
7. If you prefer, you can delete the desktop shortcut and create a new one
8. Once you are confident that CTF is working and your subfolders are correct, you can manually delete the C:\Program Files\CTF_old directory.
